

Git

Git - Why are we so... excited?

- ❖ Subversion is ok - Git is better
- ❖ Commit often, very often...
- ❖ Everything is local
- ❖ Everything is distributed
- ❖ Cheap branching
- ❖ Data assurance
- ❖ Fast
- ❖ Everything has a history... P.S That is going to be important later on
- ❖ The swiss army knife - you just have to know how to use it

What is that GIT/git/Git thing?

- ❖ Distributed Version Control System (DVCS)
- ❖ Open Source
- ❖ Started by Linus T. to aid kernel development
- ❖ Used by a lot of projects
- ❖ Git is not GitHub!
- ❖ Git is not Stash!
- ❖ Git is a free and open source distributed version control system designed to handle everything from small to very large projects with speed and efficiency

Git takes care of...

- ❖ Content: by protecting each commit with SHA-1
- ❖ History: by keeping relations
- ❖ Merges: by using the history
- ❖ Speed: by using snapshots and not diffs

Centralized vs Decentralized

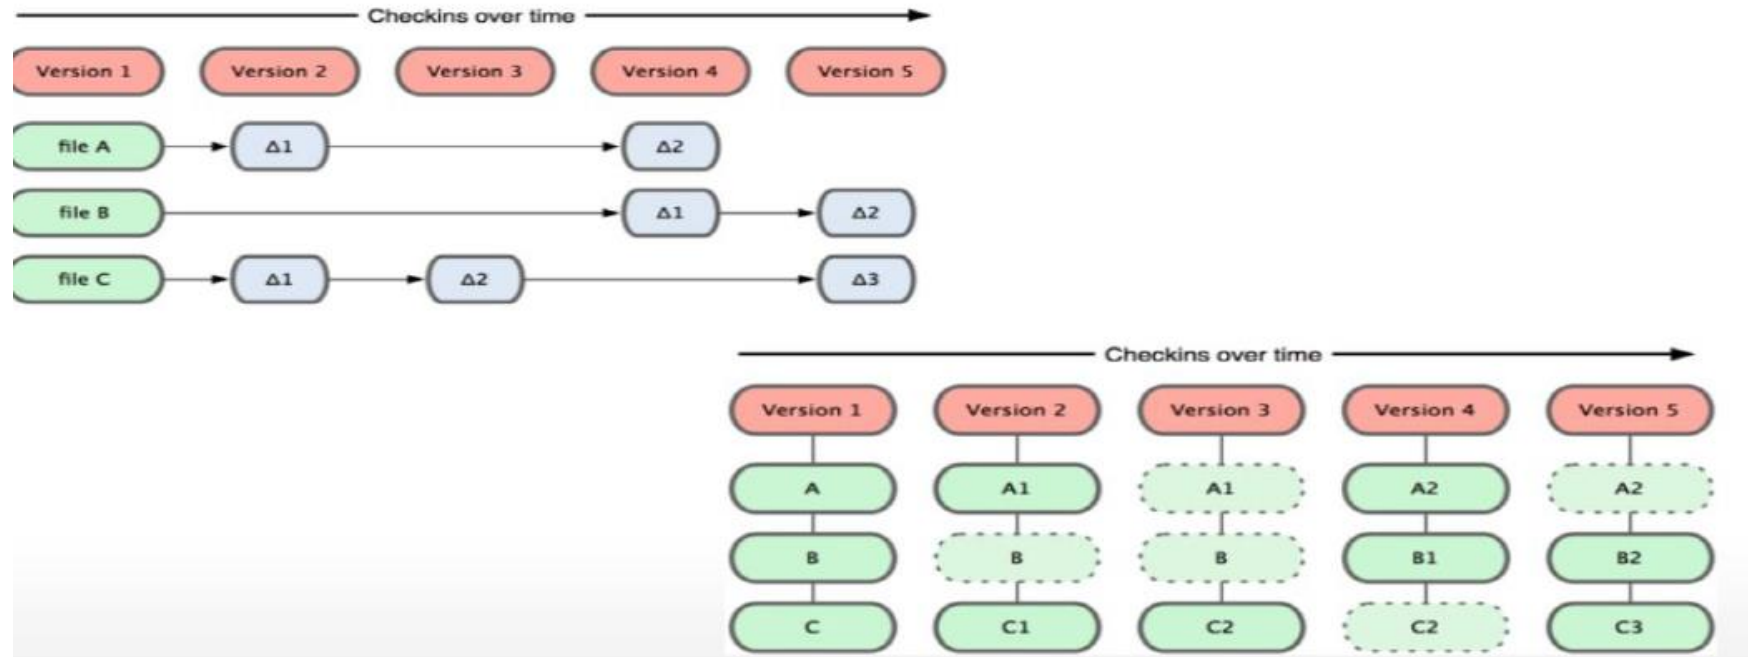

Centralized

Distributed

How things are
stored

Snapshots and not file differences

Git Concepts

❖ Stage

❖ Branch

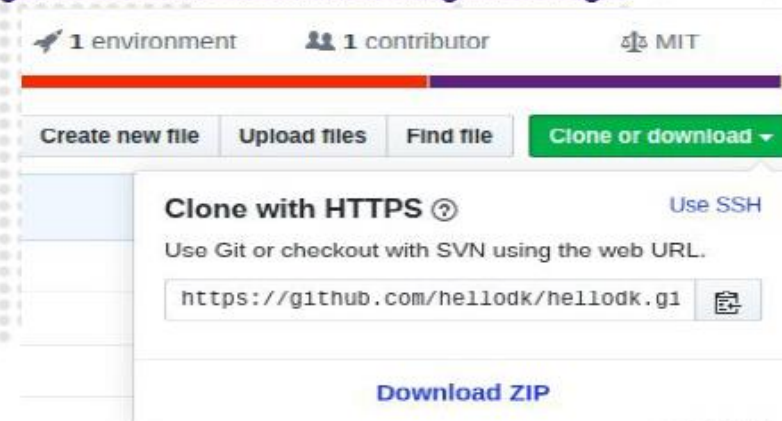

❖ Stash

Installing Git

- ❖ Update the yum repository
 - `yum update -y`
- ❖ Install git
 - `yum install -y git`
- ❖ Check version of git
 - `git version`
- ❖ Create a free github.com account

Git Common Commands

- ❖ Initialize a git repository inside a directory
 - `git init`
- ❖ Clone a git repository using ssh
 - `git clone ssh://git@github.com/[username]/[repository-name].git`
- ❖ Clone a git repository using HTTPS
 - `git clone https://github.com/hellodk/hellodk.github.io.git`

To Enable SSH between your machine and Git

- ❑ Generate keys,

```
ssh-keygen -t rsa -b 4096 -C "<email_address>"
```

- ❑ Add Keys to the agent

```
eval $(ssh-agent -s)
```

```
ssh-add ~/.ssh/id_rsa
```

- ❑ Add Public key to github keys

- ❑ Try testing

```
ssh -T git@github.com
```

Git Common Commands

- ❖ Check status of the directory(git repository)
 - `git status`
- ❖ Add a file to the staging area
 - `git add [file-name.txt]`
- ❖ Add all new and changed files to the staging area
 - `git add -A`
- ❖ Commit changes
 - `git commit -m "[commit message]"`
- ❖ Remove a file (or folder)
 - `git rm -r [file-name.txt]`

Git Common Commands

- ❖ List branches
 - `git branch`
 - `git branch -a`
- ❖ Create a new branch
 - `git branch [branch name]`
- ❖ Delete a branch
 - `git branch -d [branch name]`
- ❖ Delete a remote branch
 - `git push origin --delete [branch name]`

Git Common Commands

- ❖ Create a new branch and switch to it
 - `git checkout -b [branch name]`
- ❖ Clone a remote branch and switch to it
 - `git checkout -b [branch name] origin/[branch name]`
- ❖ Rename a local branch
 - `git branch -m [old branch name] [new branch name]`
- ❖ Switch to a branch
 - `git checkout [branch name]`
- ❖ Switch to the branch last checked out
 - `git checkout -`

Git Common Commands

- ❖ Discard changes to a file
 - `git checkout -- [file-name.txt]`
- ❖ Merge a branch into the active branch
 - `git merge [branch name]`
- ❖ Merge a branch into a target branch
 - `git merge [source branch] [target branch]`
- ❖ Stash changes in a dirty working directory
 - `git stash`
- ❖ Remove all stashed entries
 - `git stash clear`

Git Common Commands

- ❖ Push a branch to your remote repository
 - `git push origin [branch name]`
- ❖ Push changes to remote repository (and remember the branch)
 - `git push -u origin [branch name]`
- ❖ Push changes to remote repository (remembered branch)
 - `git push`
- ❖ Delete a remote branch
 - `git push origin --delete [branch name]`
- ❖ Update local repository to the newest commit
 - `git pull`

Git Common Commands

- ❖ View changes
 - `git log`
- ❖ View changes (detailed)
 - `git log --summary`
- ❖ View changes (briefly)
 - `git log --oneline`
 - `git diff [source branch] [target branch]`

Git Repositories ❖ List git repositories

➤ `git remote -v`

Branching in Git

Exercises

- ❖ Set git config
 - `git config --list`
- ❖ Set git config for user
 - `git config global user.name hellodk`
- ❖ Set git config for user
 - `git config global user.email hello.dk@outlook.com`
- ❖ Set git config for user
 - `git config global core.editor vim`

Exercises

- ❖ Create a directory and cd into it
 - `mkdir grocery`
 - `cd grocery`
- ❖ Initialize git repository
 - `git init`
- ❖ Verify directory contents
 - `ls -ltra`
- ❖ Create multiple files
 - `echo "My shopping list repository" > README.md`
 - `echo "banana" > shoppingList.txt`

Exercises

- ❖ Verify git server status
 - `git status`
- ❖ Add all the files in the staging area
 - `git add .`
- ❖ Verify git server status
 - `git status`
- ❖ Make a commit
 - `git commit -m "Added files"`
- ❖ Verify git log
 - `git log`

Exercises

- ❖ Want to make changes in the commit message
 - `git commit --amend`
- ❖ Verify the git log again and check the log message now
 - `git log`
 - `git log --format=raw`

Exercises

❖ Creating Branches

- `git branch berries`
- `git branch a1`
- `git branch a2`
- `git branch -a`
- `git branch`
- `git branch --list`
- `git checkout a1`
- `echo "From branch a1" > a1`
- `git add a1`
- `git commit -m "Added a1"`

Exercises

❖ Creating Branches

- `ls -ltr`
- `git checkout -`
- `git branch`
- `ls -ltr`

Exercises

- ❖ Create an empty repository in github.com
- ❖ Create ssh-keys if not already created
 - `ssh-keygen`
- ❖ Add the ssh keys to github
- ❖ Set the remote URL for this repository with ssh url
 - `git remote add origin git@github.com:hellodk/grocery.git`
- ❖ Push the commit to the remote
 - `git push`

Exercises

- ❖ Make changes to a file from the github
- ❖ Make changes to the same file from CLI
- ❖ Do a commit and then push to remote
- ❖ Add tags using
 - `git tag v1`
 - `git push origin v1`
 - `git tag -f v2`
 - `git push --tags`

Tags vs Branches

- ❖ Both tags and branches point to a commit
- ❖ they are thus for a specific hash and will save time by not requiring to type in a hash
- ❖ a branch always points to the top of a development line
- ❖ branch will change when a new commit is pushed
- ❖ a tag will not change
- ❖ tags are more useful to "tag" a specific version
- ❖ tag will then always stay on that version and usually not be changed
